

Frascio®

Architectural Door Pulls

FR International

FRInternational LLC
www.FRInternational.com

Company Focus

FR International is a leading manufacturer and distributor of decorative door hardware trim, with a globally recognized project base. Our Frascio brand name has over 70 years of history providing decorative handles and pulls for high end commercial and fine residential buildings worldwide. Our years of experience have been spent developing and improving designs and manufacturing efficiency, allowing us to offer you outstanding product quality and value.

FR International is pleased to present this Architectural Door Pulls catalog to illustrate and explain a portion of the design range and broad manufacturing capability we have. Door pulls continue to grow in popularity as sliding door systems are increasingly specified in the architectural and interior design community.

There are limitless opportunities for creative expression and technical variation in the world of decorative door pulls.

Environmentally-Friendly Manufacturing

Frascio door pulls are manufactured primarily from stainless steel, aluminum, and brass. The percentage of postconsumer and post-industrial recycled content is estimated as follows:

-  Stainless steel that is used in Frascio products has a post-industrial recycled content of approximately 70%, and a post-consumer recycled content of approximately 8%.
-  The aluminum and brass materials that are used to make many Frascio products typically contain 80-100% recycled material, a combination of melted scrap metal and reclaimed by-products.

The above percentages show an average of Frascio's overall production. Actual percentages on any order will vary based on the specific products that comprise that order as well as the mill source.

When no longer needed, Frascio stainless steel, aluminum and brass parts are 100% recyclable.

Frascio is committed to responsible business and manufacturing practices that help conserve resources and protect our environment.

Materials and Finishes

Architectural pulls are most frequently fabricated in stainless steel material. Most of the pulls shown in this catalog are available in stainless steel, and depending on the specific design may also be available in other materials such as brass or aluminum. Solid cast bronze is also an option in some cases.

Our standard stainless steel alloy grade used for architectural pulls is 304, which is perfect for most indoor environments and many exterior environments. For applications where air pollution and marine salt air is prevalent, consider specifying alloy grade 316, which has an even higher degree of corrosion protection.

In addition to alloy grade selection, the surface finish of stainless steel can affect corrosion resistance, as smooth polished surfaces deflect the deposit of airborne debris that can lead to corrosion better than a satin surface. For optimal resistance to surface stains caused by corrosion, specify polished finish.

The most common finishes provided in stainless steel material are BHMA 630 Satin Stainless and BHMA 629 Polished Stainless. Other standard BHMA finishes can also be created by applying coatings to the stainless steel or brass base material. Refer to the FR International Finishes Chart as a reference.

Custom finishes are also available upon request.

Our Product Nomenclature and Identification System

FR International organizes its door pull identification system around two primary characteristics of the pull; the **Cross Section Shape of the Grip** and the **General Design Style**.

Grip Cross Section

For categorization purposes, grip cross sections are organized into 5 options, with a corresponding Alpha character assigned to each. This alpha character provides an important designation in our nomenclature for specification and ordering purposes.

A Round

B Square

C Rectangular

D Oval

E Varied*

* A grip cross section is considered "Varied" if it is asymmetric or if there is more than one shape incorporated into the grip portion of the pull.

General Design Style

For this second identifying characteristic, we organize the style of pull into one of three general category options, with a numeric character assigned to each. This numeric character is also used as an important designation in our nomenclature for specification and ordering purposes.

1 Infinity Mounted

An Infinity mounted pull is one where both ends of the pull grip terminate into the door surface.

4 Standoff Mounted

The term Standoff is used to describe a mounting posts fastened to the grip as a separate component. In this style, the ends of the pull grip do NOT terminate into the door surface.

7 Sculpted

This term is used to describe contoured cast, asymmetric, and other creative design shapes beyond simple geometric shapes and components.

Fastening Systems

Standard Mounting Types

Four typical mounting types are shown below for consideration. Each has a corresponding alpha character used in our nomenclature for specification and ordering purposes. Other mounting options are also available upon request to accommodate specific substrate materials and project conditions.

A. Concealed Surface Mounting

B. Throughbolt Mounting

C. Finished Head Throughbolt Mounting

D. Back-To-Back Mounting

Base Plate Rosettes

Optional base plate rosettes are available for standard round standoff posts that provide function and additional stability. Designate "with rosette" for rosettes in the "Other" column if desired

How to Specify and Order

Shown below is the typical format for specifying and ordering door pulls:

Product Category	Grip Cross Section Shape	Style	Pull Number (3 digits)	CTC/OAL (mm)	Finish	Mounting Type	Door Thickness	Other
DP	A	1	000	475/500	630	A	1-3/4	
DP Door Pull	A Round B Square C Rectangular D Oval E Varied	1 Infinity Mounted 4 Standoff Mounted 7 Sculpted	Refer to catalog model number		629 630	A Concealed B Throughbolt C Finished Head D Back-to-Back		

INFINITY MOUNTED PULLS

Infinity mounted pulls have a shape that allows both ends of the pull grip to flow directly into the door surface.

Custom Design and Manufacturing

FR International has an experienced and highly capable engineering department able to bring your ideas to life. We use 3D CAD design technology to engineer your ideas from concept to image renderings, and oversee through prototypes to production.

Shown here are a small sampling of various custom design projects that incorporated unique shapes or a variety of materials and finishes, including stainless steel, brass, aluminum, stone, leather, powder coating, and electroplating. We welcome the opportunity to create a custom solution for you.

LDP Locking Door Pull Program

In addition to the Architectural Door Pull Program presented in this catalog, FR International also offers the LDP Locking Door Pull Program which provides a variety of locking pulls and their matching non-locking complements. For details related to the LDP Program, please refer to our Locking Door Pull catalog brochure, available via download at FRInternational.com or via digital media.

Frascio locking door pulls add contemporary design and security functionality to door openings of all sizes. The concealed deadbolt locking system inside the pull provides a clean and elegant installation that eliminates the need for unsightly patch fittings or rails on glass door applications.

- ▶ Cylinder and turnknob located at a convenient height, reducing effort required to lock and unlock
- ▶ Multiple size, shape, design, and finish options and custom specification capability allow for unlimited combinations to meet your projects requirements

FEATURES

Heavy duty stainless steel construction

Multiple lengths available, including custom

Multiple shapes and designs available, including custom

Multiple operating configurations available; standard is key operated from exterior, turnknob from interior

Can be used with both swinging and sliding doors

Non-keyed privacy function available as well as matching non locking pulls

Multiple locking options: bottom bolt standard, top bolt, or dual locking available

Bolt location: approximately 2-5/8" from face of door to centerline of bolt

16mm stainless steel deadbolt with 32mm throw. Includes dust proof floor strike.

Accommodates most keying systems including standard non-interchangeable core, small format interchangeable core, large format interchangeable core, European profile, and other systems

Standard door thickness range: 8-19mm glass or solid panel;
1-3/4" to 2-1/4" aluminum, hollow metal, or wood doors

Available standard in satin and polished stainless steel finishes.
Other custom finishes available.
